Yoni Stern

FAT 32 Reader

Files:

fat32_reader.java

Contains my code, in the code I used very similar techniques from previous Operating Systems assignments

Instructions:

In command line

javac fat32_reader.java

java fat32_reader image.img

Challenges:

I ran into problems because Java doesn't have unsigned numbers (I ran into problems when doing a bitwise or with a byte and an int because the byte was signed extended into an int). Writing the code I ran into many problems and spent lots of time looking for errors and fixing errors.
